Helios e-Link

ViDA-ready portal for Helios information systems

A single hub for the electronic future (ViDA)

- The Helios e-Link cloud application is fully developed and managed by Asseco Solutions a.s. (CZ)
- Enables seamless connectivity between the Helios Nephrite information system and service providers (Peppol, KSeF, etc.)
- Simple selection and configuration of supported providers
- Overview of transferred documents (in both directions)
- Overview of archived data
- Legislative-compliant archiving, secured and segregated for each business entity/ID (for multi-database licenses, accounting firms, etc.)
- Application available on AVAplace.com
- Requires an installed Inuvio server and AVA agent (free of charge)

The price of the Helios e-Link service consists of three clear components:

- Monthly fee per connected company (business ID)
- Monthly fee per connected e-invoicing provider
- Monthly fee for electronic document archiving with a 1 GB capacity (per business ID)

You pay only for the number of connected companies and services you actually use. The volume of transferred documents does not affect the Helios e-Link price.

Invoicing and automatic archive expansion

The service is billed monthly in arrears based on actual usage.

The service includes a 1 GB archive capacity for each registered business ID. If this capacity is reached, it is automatically increased by another 1 GB for €2 per month. This way, the customer does not need to order an upgrade and can use the service without interruption.

The increased capacity will be automatically reflected in the billing for the relevant period.
