MODULE CHARACTERISTICS

• Provides an overview of all projects controlled in the "waterfall model".

• Enables managing projects without the need for additional - non-integrated - software.

• Projects can be logically structured by stages. Stages can be structured by scheduling specific tasks.

It is used in the following areas:

• Long-term and complex production (custom) projects with the need to record, plan and manage pre-and post-production stages

• construction projects

• R&D projects (samples, prototypes, in-house development)

• product launch into practice/operation

• projects the essence of which is the provision of services

• investment projects from the perspective of the client

• internal projects with connections to other departments of the company

• projects for planning social events, installation of equipment, etc.
